

This shared folder contains the full set of slides and videos for the [Algorithmic Toolbox](http://bit.ly/algotoolboxclass) course of the [Data Structures and Algorithms](http://bit.ly/algotoolboxclass) Specialization at Coursera. One of the main features of this class (and the whole specialization) is programming assignments. In such assignments, your goal is to implement an algorithm solving a given computational problem in less than a few seconds, even on large datasets. Solving such programming assignments will give you a much deeper understanding of algorithms. You will also gain an invaluable experience in solving programming problems similar to those given during interviews at high-tech companies as well as testing and debugging your solutions. Course webpage: <http://bit.ly/algotoolboxclass>
